## Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 1 PCM-9150 CPU Card
- 1 Quick Installation Guide
- 1 CD-ROM for manual (in PDF format) and drivers
- 1 Jumper cap

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

**General  
Information**

## **1.1 Introduction**

---

The PCM-9150 is AAEON's latest low power consumption solution featuring Intel® innovation. It adopts Intel's® latest Pentium® M chipset-Mobile Intel® 915GM Express Chipset, which has been validated with Intel® Pentium® M CPUs and the newest PCI-Express interface. Therefore the PCM-9150's peripheral transmission speed can upgrade effectively, especially on multi-port Gigabit LAN applications. For these kinds of applications, PCM-9150 has 2 Gigabit LAN ports onboard to satisfy firewall and small data server demands.

### **The Greatest Performance on Multimedia applications**

For multimedia applications, the Mobile Intel® 915GM Express Chipset has Intel® Graphics media Accelerator (GMA900) function built in the chipset. This feature will be of good use in future KIOSK, advertisement, and information display applications.

### **Versatile dual view combinations**

Besides LCD support, PCM-9150 also allows customer to show different content on CRT, LCD, DVI or TV (two of them) at the same time. It meets dual view demands as the most cost-effective display solution.

**Widely Expanded Interfaces**

PCM-9150 promises you off-the-shelf expansion possibilities with versatile expansion interfaces-Mini PCI, PCI, and PCI-Express x1. By adopting AAEON's versatile Mini PCI modules, you can extend your onboard features such as adding a third LAN port, sixth or even eighth COM port, and one IEEE 1394a port.

**Environment-Friendly applications**

The RoHS compliant PCM-9150 is the ideal choice for high performance and energy-saving demands that must be implemented with low power consumption and pleasing multimedia presentation. For environment-friendly applications, the PCM-9150 no doubt is a perfect fit.

## 1.2 Features

---

- Supports Intel® Pentium M / Celeron® M Series Processors
- Supports 18/36-bit LVDS TFT Panel
- Supports Two DDRII 400/533 SoDIMM Memory Up to 2GB
- Dual PCI-Express Gigabit LAN
- 6.1 CH AC-97 2.0 Codec With S/P DIF Function
- Supports Mini-PCI
- 4 USB 2.0 / 4 COMs / Digital IO

### 1.3 Specifications

---

#### System

- CPU Up to Socket 478 Intel® Pentium® M 2.13G (400/533MHz FSB) / Celeron® M 1.5G (400MHz FSB)
- System Memory 2 x DDRII SoDIMM support DDRII 400/533 up to 2GB
- Chipset Intel® 915GM + ICH6M + ITE 8712 + Fintek F81216D
- I/O Chipset Intel® ICH6M + ITE 8712 + Fintek F81216D
- Ethernet Marvell 88E8053, 10/100/1000Mb Chip, RJ-45 x 2
- BIOS Award Plug & Play BIOS – 512KB ROM
- Watchdog Timer ITE 8712, generates a time-out system reset
- H/W status monitoring ITE 8712, supports power supply voltages and temperatures monitoring functions
- SSD One Type II Compact Flash Card, Genesys GL813 USB 2.0 interface
- Expansion Interface Mini-PCI socket x 1, PCI x 1, PCI-Express by 1 x 1

- Battery Lithium battery
- Power Requirement +5V, +5VSB, +12V ATX, supports ATX and AT type of power
- Board Size 8”(L) x5.75” (W)  
(203mm x 146mm)
- Gross Weight 1.2lb (0.5kg)

**Display**

- Chipset Intel® 915GM + Chromtel 7307C
- Memory Shared system memory up to 128MB with DVMT (128MB support when the system memory over 256MB)
- Resolutions Up to 1280x768@24bit for CRT  
Up to 1280x768@36bit for LCD  
Support: CRT/LCD, CRT/TV, CRT/DVI, LCD/DVI, LCD/TV, DVI/TV Dual View/Simultaneous display under Windows Operation System
- LCD Interface Up to 36bit dual channel LVDS
- TV-Out Supports NTSC/PAL; Supports RCA and S-terminal connectors

**I/O**

- MIO EIDE<sub>x1</sub>(UDMA100 x 1), S-ATA x 2, RS-232<sub>x3</sub> (COM1/3/4), RS-232/422/485<sub>x1</sub> (COM2), Keyboard + Mouse x1, Parallel x 1
- IrDA One IrDA Tx/Rx header
- Audio MIC-in/ Line-in/ Line-out/ CD-in, S/P DIF in/out, Stereo Amplifier included
- USB Two 5x2 pin headers support 4 USB 2.0 Ports (One for Compact Flash)
- Digital I/O 8 ports Digital I/O (Each port can be programmed to be in or out)

**Quick  
Installation  
Guide**

**Notice:**

*The Quick Installation Guide is derived from Chapter 2 of user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.*

## 2.1 Safety Precautions

---

**Warning!**

*Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.*

**Caution!**

*Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis*

## 2.6 Setting Jumpers

---

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

**Award  
BIOS Setup**

### 3.1 System Test and Initialization

---

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

#### **System configuration verification**

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

The PCM-9150 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

## 3.2 Award BIOS Setup

---

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

### Entering Setup

Power on the computer and press <Del> immediately. This will allow you to enter Setup.

### Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

### Advanced BIOS Features

Use this menu to set the advanced features available on your system.

## **Advanced Chipset Features**

Use this menu to change the values in the chipset registers and optimize your system performance.

## **Integrated Peripherals**

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

## **Power Management Setup**

Use this menu to specify your settings for power management. (HDD power down, power on by ring, KB wake up, etc.)

## **PnP/PCI Configurations**

This entry appears if your system supports PnP/PCI.

## **PC Health Status**

This menu allows you to set the shutdown temperature for your system.

## **Frequency/Voltage Control**

Use this menu to specify your settings for auto detect DIMM/PCI clock and spread spectrum.

## **Load Fail-Safe Defaults**

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

## **Load Optimized Defaults**

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

## **Set Supervisor/User Password**

Use this menu to set Supervisor/User Passwords.

## **Save and Exit Setup**

Save CMOS value changes to CMOS and exit setup.

## **Exit Without Saving**

Abandon all CMOS value changes and exit setup.

**Driver  
Installation**

The PCM-9150 comes with an AutoRun CD-ROM that contains all drivers and utilities that can help you to install the driver automatically.

Insert the driver CD, the driver CD-title will auto start and show the installation guide. If not, please follow the sequence below to install the drivers.

***Follow the sequence below to install the drivers:***

Step 1 – Install Intel INF Update

Step 2 – Install Intel Extreme Graphics Driver

Step 3 – Install Marvell YUKON Win LAN Driver

Step 4 – Install Realtek AC97 Codec Driver

USB 2.0 Drivers are available for download using Windows<sup>®</sup> Update for both Windows<sup>®</sup> XP and Windows<sup>®</sup> 2000. For additional information regarding USB 2.0 support in Windows<sup>®</sup> XP and Windows<sup>®</sup> 2000, please visit [www.microsoft.com/hwdev/usb/](http://www.microsoft.com/hwdev/usb/).

Please read instructions below for further detailed installations.

## 4.1 Installation:

---

Insert the PCM-9150 CD-ROM into the CD-ROM drive and install the drivers from Step 1 to Step 4 in order.

### Step 1 – Install Intel INF Update

1. Click on the **Step 1 – Install Intel INF Update** folder.
2. Choose the OS your system is.
3. Double click on **the \*.exe file located in each OS folder.**
4. Follow the instructions that the window shows.
5. The system will help you install the driver automatically.

### Step 2 – Install Intel Extreme Graphics Driver

1. Click on the **Step 2 – Install Intel Extreme Graphics Driver** folder.
2. Choose the OS your system is.
3. Double click on **the \*.exe file located in each OS folder.**
4. Follow the instructions that the window shows.
5. The system will help you install the driver automatically.

Remark: You can choose the different display ways by pressing below hot key,

C+A+F1=CRT, C+A+F2=LCD, C+A+F3=TV, C+A+F4=DVI,  
C+A+F12=Graphic Control Panel

### Step 3 –Install Marvell YUKON Win LAN Driver

1. Click on the **Step 3 –Install Marvell YUKON Win LAN Driver** folder.
2. Choose the OS your system is.
3. Double click on the **\*.exe file located in each OS folder.**
4. Follow the instructions that the window shows.
5. The system will help you install the driver automatically.

### Step 4 – Install Realtek AC97 codec Driver

1. Click on the **Step 4 – Install Realtek AC97 codec Driver** folder.
2. Choose the OS your system is.
3. Double click on the **\*.exe file located in each OS folder.**
4. Follow the instructions that the window shows.
5. The system will help you install the driver automatically.

**Note:**

Under the Window OS environment, if the CRT connector is connected to display monitor by the data switch device, the user need to set the color and resolution from Intel Graphic utility (VGA driver) instead of setting from the control panel in case of the wrong display appearance.

# Programming the Watchdog Timer

## B.1 Programming

PCM-9150 utilizes ITE 8712 chipset as its watchdog timer controller.

Below are the procedures to complete its configuration and the AAeon initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

### Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8712 enters the normal mode with all logical devices disabled except KBC. The initial state (enable bit) of this logical device (KBC) is determined by the state of pin 121 (DTR1#) at the falling edge of the system reset during power-on reset.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

### (1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h, 01h, 55h, 55h:	2Eh	2Fh

### (2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

### (3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

## WatchDog Timer Configuration Registers

LDN	Index	R/W	Reset	Configuration Register or Action
All	02H	W	N/A	Configure Control
07H	71H	R/W	00H	WatchDog Timer Control Register
07H	72H	R/W	00H	WatchDog Timer Configuration Register
07H	73H	R/W	00H	WatchDog Timer Time-out Value Register

### Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

Bit	Description
7-2	Reserved
1	Returns to the Wait for Key state. This bit is used when the configuration sequence is completed
0	Resets all logical devices and restores configuration registers to their power-on states.

### WatchDog Timer Control Register (Index=71h, Default=00h)

Bit	Description
7	WDT is reset upon a CIR interrupt
6	WDT is reset upon a KBC (mouse) interrupt
5	WDT is reset upon a KBC (keyboard) interrupt
4	WDT is reset upon a read or a write to the Game Port base address
3-2	Reserved
1	Force Time-out. This bit is self-clearing
0	WDT Status
	1: WDT value reaches 0.
	0: WDT value is not 0

**WatchDog Timer Configuration Register (Index=72h,****Default=00h)**

<b>Bit</b>	<b>Description</b>
7	WDT Time-out value select
	1: Second
	0: Minute
6	WDT output through KRST (pulse) enable
5-4	Reserved
3-0	Select the interrupt level <sup>Note</sup> for WDT

**WatchDog Timer Time-out Value Register (Index=73h,****Default=00h)**

<b>Bit</b>	<b>Description</b>
7-0	WDT Time-out value 7-0
